

Ways To Achieve A 5 Point Curve

- 1. Do all your HW assignments AND labs on time**
Each homework assignment will be either checked for completeness or graded. Each lab we do in class will have a due date, depending on the length of the lab. Some will be due the next day while others will have a longer timeline.
- 2. Create a review book**
Create a review book in a marble notebook for each unit covered during the quarter. I will provide a list of questions, diagrams to draw, charts to analyze and general information to be included.
- 3. Current events article summary.**
There are many environmental issues that come up in the news almost daily. Find 3 articles and type a summary of the article. Be sure to include issue being discussed, harm to the environment/individual organism and any resolution that is discussed.
- 4. Complete all the take home chapter assignments**
Notes, practice questions and videos will be assigned each week that should be filled in and completed. These will be checked for completeness and discussed in class. Classwork and labs will be done in class to reenforce what was learned at home. These will be kept in a separate section of your notebook. There will be a graded assignment based on the notes, practice questions and videos at the end of each quarter.
- 5. Create a review sheet for each unit in the quarter with word bank**
Create a fill in review sheet for each unit in the quarter. The review sheet should include diagrams to label (with word bank), matching, fill in the blanks (with word bank) and short answer questions. You should include an answer key with your review sheet.
